

Move a person in wheelchair safely
up or down stairs

Motorized electronic traction control grips
the floor with a steady traveling speed

Ideal when a conventional accessibility
lift cannot be installed

Savaria™ Roby Powered Stair Climber

ACCESSIBILITY WHEN NEEDED

The Savaria Roby powered stair climber allows an operator to move a person in a wheelchair up and down stairs using a motorized traction control system. The system is well-suited as an emergency evacuation system for buildings such as schools, banquet halls and other public buildings.

Battery powered and portable, the system can be used when there is no elevator or lift, or when an elevator or lift cannot be used. After securely fastening the wheelchair with its easy-clip system, the operator guides the device up or down the stairs. The tracking system grips the stairs to ensure a solid contact and moves along each stair with smooth and quiet operation. The passenger remains in a natural upright position.

Savaria™ Roby Powered Stair Climber

ACCESSIBILITY WHEN NEEDED

- Electronic traction control system ensures a secure contact with the floor and rubberized track does not scratch the floor
- Attaches securely with clamps to most standard adult or pediatric manual wheelchairs
- Long-lasting battery can travel many trips up or down on a single charge**
- Smooth and quiet operation
- Can be used indoors and outdoors, multiple flights with intermediate landings
- Manual emergency device for safe decent in case of dead battery
- Compact two-piece design detaches for easy transport
- Keyed operation to restrict access
- Electronic battery charger with charge indicator, charges on standard power
- Easy to guide for able-bodied operator
- Can be used on stairs up to a 35° angle

The Savaria Roby powered stair climber is intended to be operated by an able-bodied attendant.
